

# INSTALLING OBS FOR THE FIRST TIME

Step 1: To install OBS, you must first head to the link provided below and download the installer located on this page.

- [Download | OBS \(obsproject.com\)](https://obsproject.com) (Left Click to View)

Choose a location to install  
OBS (Local C drive is fine)

Installed? Great! Open that shutter up and let's set up the next application!

# Install OBS.LIVE

OBS. Live is an add-on needed for OBS as it integrates the use of stream elements into obs and provides a range of features which we can take advantage of for obs.

Install the add-on here - [OBS. Live | Open Broadcaster Software Streaming Knowledge Base](#) (Left Click to view link). The download process is relatively the same; however, at this screen, you DO NOT need to install OBS Studio. DO NOT CLICK OBS Studio as this will install the OBS Studio application again. Just hit Install.
